DOCUMENT ANALYSIS

Document	Example: ai essay (example dataset, CC BY 3.0)
Date	2026-10-02 23:46:24
Word count	434
Language	en
Model	en-20261002-783106e4aa39-nonnative
Privacy	Privacy mode: Local processing. No text leaves this computer.

AI-text detection is probabilistic. The results should not be used as sole evidence for academic misconduct, disciplinary action, or authorship determination. The detector is designed to assist human review, not to replace it.

RESULT

AI-associated probability (share of text)	100%
Human-associated probability (share of text)	0%
Uncertain / mixed	0%
Document-level AI probability (calibrated)	100%
Category	AI-generated

Based on the characteristics measured by this model, the text contains patterns that are strongly associated with AI-generated writing. This is a statistical estimate, not a determination of authorship.

Shares are fractions of words in sentences whose calibrated sentence probability is ≥ 0.73 (AI-associated), ≤ 0.18 (human-associated) or in between (uncertain/mixed).

CONFIDENCE

High (97%) - More reliable statistical analysis (text length). Confidence is separate from likelihood: it reflects text length, detector agreement, feature coverage and committee stability.

length reliability	0.99
detector agreement	0.97
feature coverage	1.00
committee stability	0.99

MODEL DISAGREEMENT

The detectors partly disagree.

Detector	AI prob.	± error	weight
Statistical model (gradient boosting, all features)	100%	0.000	0.65
Neural network (MLP, all features)	97%	0.000	0.35
Perplexity model	60%	0.004	0.00
Burstiness model	64%	0.006	0.00
Stylometric model	91%	0.003	0.00
Vocabulary model	81%	0.002	0.00
Syntax model	63%	0.007	0.00
Semantic model	70%	0.004	0.00
Repetition & transitions model	88%	0.007	0.00

SIGNALS

No individual signal stands out as strongly associated with AI-generated text. These are statistical indicators, not proof of AI authorship.

STATISTICAL ANALYSIS

Perplexity

Measure	Value	Human pct.	Human median	AI median
Mean sentence surprisal (bits/word (unigram proxy))	12.176	83.900	11.184	11.362
Median word surprisal	12.872	91.100	11.295	11.760
Lowest sentence surprisal	10.575	85.200	9.464	9.899

Burstiness

Measure	Value	Human pct.	Human median	AI median
Sentence perplexity std.	1.018	47.400	1.040	0.899
Perplexity burstiness index B	-0.846	37.300	-0.829	-0.853
Sentence-length variation (CV)	0.320	20.500	0.435	0.326
Sentence-length burstiness B	-0.516	20.500	-0.394	-0.508
Syntactic variation (CV of depth)	0.298	26.600	0.363	0.312

Stylometry

Measure	Value	Human pct.	Human median	AI median
---------	-------	------------	--------------	-----------

Average sentence length (words)	18.9	42.600	20.000	19.887
Median sentence length	19.0	50.000	19.000	19.500
Average word length	6.02	96.300	4.863	5.073
Function-word share	0.329	4.700	0.453	0.435
Contractions per 100 words	0.00	55.000	0.000	0.000
First-person singular share	0.0000	55.000	0.000	0.000
Adverb share	0.035	41.000	0.040	0.031
Adjective share	0.136	92.400	0.083	0.091

Punctuation

Measure	Value	Human pct.	Human median	AI median
Commas per 100 words	8.99	95.100	4.647	4.799
Semicolons per 100 words	0.00	80.000	0.000	0.000
Colons per 100 words	0.00	65.000	0.000	0.000
Dashes per 100 words	0.00	75.000	0.000	0.000
Parentheses per 100 words	0.00	35.000	0.461	0.000
Punctuation variety (entropy)	0.284	6.700	0.471	0.386

Vocabulary

Measure	Value	Human pct.	Human median	AI median
Moving-average type-token ratio	0.873	95.600	0.796	0.794
MTLD lexical diversity	120.6	92.200	79.115	76.000
Hapax legomena ratio	0.797	68.900	0.776	0.774
Word commonness (Zipf)	4.59	40.500	4.642	4.581
Rare-word share	0.034	32.300	0.052	0.044
Vocabulary growth (Heaps)	0.775	21.200	0.809	0.801

Syntax

Measure	Value	Human pct.	Human median	AI median
Dependency-tree depth	6.09	62.000	5.700	6.000
Clauses per sentence	2.74	68.000	2.417	2.350
Subordinate clauses per sentence	0.87	40.600	1.000	0.933
Passive-voice sentences	0.087	27.700	0.174	0.150
Sentence-opening variety	0.722	88.300	0.581	0.525
Syntactic diversity	0.638	19.800	0.706	0.661

Repetition

Measure	Value	Human pct.	Human median	AI median
Repeated 3-word phrases	0.047	78.000	0.021	0.036
Repeated grammatical templates	0.561	82.800	0.472	0.532
Repeated sentence structures	0.188	65.000	0.125	0.188
Transition words per sentence	0.348	90.800	0.100	0.107
Transition diversity	0.625	16.900	1.000	1.000
Sentence-initial transitions	0.250	18.800	0.750	0.800

Semantic

Measure	Value	Human pct.	Human median	AI median
Neighbouring-sentence similarity	0.104	42.500	0.116	0.133
Local coherence gain	-0.034	6.000	0.027	0.002
Topic-jump rate	0.773	90.300	0.500	0.571
Semantic redundancy	0.341	84.100	0.258	0.302
Semantic compression	0.114	40.500	0.129	0.151

Consistency

Measure	Value	Human pct.	Human median	AI median
Style drift (mean JS divergence)	0.009	5.900	0.019	0.014
Largest style shift	0.017	14.700	0.033	0.026

Paragraphs

Measure	Value	Human pct.	Human median	AI median
Paragraph-length variation (CV)	0.080	n/a	n/a	n/a
Paragraph perplexity variation	0.498	n/a	n/a	n/a

HEATMAP

1 One of the most helpful tools for clinical office assistants is Call Please. 2 Please. 3 This tool allows them to easily manage incoming calls, log communication details, and track follow-ups. 4 With its user-friendly interface and intuitive functionalities, Call Please ensures that no important phone calls are missed, providing prompt and efficient communication with patients and other stakeholders. 5 This not only saves time but also improves the overall service quality by preventing any delays or miscommunication.

6 Evernote is another valuable time management tool that clinical office assistants can benefit from. 7 It is a note-taking application that allows users to create, organize, and share digital notes. 8 Clinical office assistants can use Evernote to keep track of important information such as patient records, medical history, and appointment schedules. 9 This tool enhances productivity by providing easy access to essential data, eliminating the need for manual searching through paper documents, and improving the efficiency of information retrieval.

10 Todoist is a popular task management tool that can significantly improve the time management skills of clinical office assistants. 11 It enables them to create task lists, set reminders, and prioritize their work. 12 By having a clear overview of their daily tasks and deadlines, clinical office assistants can effectively plan and organize their workflow, ensuring that nothing is overlooked or forgotten. 13 This tool empowers them to stay focused and complete tasks in a timely manner, ultimately enhancing productivity and service delivery.

14 NueMD is a comprehensive practice management software that offers various features to streamline administrative processes in clinical offices. 15 It provides tools for appointment scheduling, electronic medical records management, billing, and reporting, among others. 16 By utilizing NueMD, clinical office assistants can automate repetitive tasks, reduce paperwork, and enhance data accuracy. 17 This allows them to allocate more time to patient care and other important responsibilities, ultimately improving the quality of service provided.

18 Lastly, the Medical Assisting Pocket app provides clinical office assistants with access to quick medical references, drug information, and other essential resources. 19 By having instant access to crucial information, clinical office assistants can promptly respond to patient queries and make informed decisions. 20 This tool not only increases productivity but also enhances the overall service quality by ensuring that accurate and up-to-date information is readily available.

21 In conclusion, time management tools such as Call Please, Evernote, Todoist, NueMD, and the Medical Assisting Pocket significantly improve the efficiency and effectiveness of clinical office assistants. 22 These tools assist in managing communication, organizing information, prioritizing tasks, automating processes, and accessing medical references. 23 By utilizing these tools, clinical office assistants can enhance productivity, streamline operations, and provide high-quality service in a healthcare setting.

GRAPHS

Sentence perplexity (mean surprisal)

Burstiness: local variation of predictability

Style drift between consecutive windows

POTENTIAL AUTHORSHIP/STYLE TRANSITIONS

No statistically significant style transition was detected.

SECTION ANALYSIS (sentence by sentence)

#	Sentence	AI lik.	Conf.
1	One of the most helpful tools for clinical office assistants is Call	73%	High
2	Please.	73%	High
3	This tool allows them to easily manage incoming calls, log communication details, and track follow-ups.	73%	High
4	With its user-friendly interface and intuitive functionalities, Call Please ensures that no important phone calls are missed, providing prompt and efficient communication with patients and other stakeholders.	88%	High
5	This not only saves time but also improves the overall service quality by preventing any delays or miscommunication.	95%	High
6	Evernote is another valuable time management tool that clinical office assistants can benefit from.	98%	High
7	It is a note-taking application that allows users to create, organize, and share digital notes.	99%	High
8	Clinical office assistants can use Evernote to keep track of important information such as patient records, medical history, and appointment schedules.	97%	High
9	This tool enhances productivity by providing easy access to essential data, eliminating the need for manual searching through paper documents, and improving the efficiency of information retrieval.	99%	High
10	Todoist is a popular task management tool that can significantly improve the time management skills of clinical office assistants.	100%	High

#	Sentence	AI lik.	Conf.
11	It enables them to create task lists, set reminders, and prioritize their work.	100%	High
12	By having a clear overview of their daily tasks and deadlines, clinical office assistants can effectively plan and organize their workflow, ensuring that nothing is overlooked or forgotten.	100%	High
13	This tool empowers them to stay focused and complete tasks in a timely manner, ultimately enhancing productivity and service delivery.	100%	High
14	NueMD is a comprehensive practice management software that offers various features to streamline administrative processes in clinical offices.	100%	High
15	It provides tools for appointment scheduling, electronic medical records management, billing, and reporting, among others.	100%	Medium
16	By utilizing NueMD, clinical office assistants can automate repetitive tasks, reduce paperwork, and enhance data accuracy.	100%	High
17	This allows them to allocate more time to patient care and other important responsibilities, ultimately improving the quality of service provided.	100%	High
18	Lastly, the Medical Assisting Pocket app provides clinical office assistants with access to quick medical references, drug information, and other essential resources.	100%	High
19	By having instant access to crucial information, clinical office assistants can promptly respond to patient queries and make informed decisions.	100%	High
20	This tool not only increases productivity but also enhances the overall service quality by ensuring that accurate and up-to-date information is readily available.	100%	High
21	In conclusion, time management tools such as Call Please, Evernote, Todoist, NueMD, and the Medical Assisting Pocket significantly improve the efficiency and effectiveness of clinical office assistants.	100%	High
22	These tools assist in managing communication, organizing information, prioritizing tasks, automating processes, and accessing medical references.	100%	High
23	By utilizing these tools, clinical office assistants can enhance productivity, streamline operations, and provide high-quality service in a healthcare setting.	100%	High

LIMITATIONS

- AI-text detection is probabilistic and produces both false positives (human text flagged) and false negatives (AI text missed).
- Probabilities are calibrated on held-out data with equal numbers of human and AI documents (a 50% prior). The share of AI text in your context changes how a given score should be read.
- Performance drops on text from AI models, domains, languages and writing populations that differ from the training data; see the evaluation report for measured cross-model and cross-domain results.
- Paraphrasing, translation, heavy human editing and short texts reduce detection reliability.
- Formulaic genres (legal, scientific, technical) and highly polished human writing can resemble AI-generated text statistically.
- Spelling or grammar mistakes, dialect, nationality and writing ability are never used as evidence of AI authorship, but non-native writing can still differ statistically from the training data; check the false-positive audit in the evaluation report.
- Sentence-level scores use a 5-sentence context window and are less reliable than document-level scores.
- Detected style transitions indicate a statistical change in writing characteristics, not a change of author.

AI-text detection is probabilistic. The results should not be used as sole evidence for academic misconduct, disciplinary action, or authorship determination. The detector is designed to assist human review, not to replace it.
