DOCUMENT ANALYSIS

Document	Example: hybrid news (example dataset, CC BY 3.0)
Date	2026-10-02 23:46:26
Word count	496
Language	en
Model	en-20261002-783106e4aa39-nonnative
Privacy	Privacy mode: Local processing. No text leaves this computer.

AI-text detection is probabilistic. The results should not be used as sole evidence for academic misconduct, disciplinary action, or authorship determination. The detector is designed to assist human review, not to replace it.

RESULT

AI-associated probability (share of text)	0%
Human-associated probability (share of text)	5%
Uncertain / mixed	95%
Document-level AI probability (calibrated)	45%
Category	Human-assisted

Based on the characteristics measured by this model, the text contains patterns that are weakly associated with AI-generated writing. This is a statistical estimate, not a determination of authorship.

Shares are fractions of words in sentences whose calibrated sentence probability is ≥ 0.73 (AI-associated), ≤ 0.18 (human-associated) or in between (uncertain/mixed).

CONFIDENCE

High (95%) - More reliable statistical analysis (text length). Confidence is separate from likelihood: it reflects text length, detector agreement, feature coverage and committee stability.

length reliability	0.99
detector agreement	0.96
feature coverage	1.00
committee stability	0.93

MODEL DISAGREEMENT

The detectors largely agree.

Detector	AI prob.	± error	weight
Statistical model (gradient boosting, all features)	44%	0.088	0.65
Neural network (MLP, all features)	41%	0.195	0.35
Perplexity model	59%	0.001	0.00
Burstiness model	57%	0.004	0.00
Stylometric model	42%	0.005	0.00
Vocabulary model	63%	0.006	0.00
Syntax model	40%	0.009	0.00
Semantic model	47%	0.002	0.00
Repetition & transitions model	38%	0.006	0.00

SIGNALS

Strongest signals toward AI-associated patterns (the overall score is not elevated):

- few parentheses
- uniform word commonness
- fewer words used twice
- few unknown words or misspellings
- transitions consistently followed by commas

These are statistical indicators, not proof of AI authorship.

STATISTICAL ANALYSIS

Perplexity

Measure	Value	Human pct.	Human median	AI median
Mean sentence surprisal (bits/word (unigram proxy))	11.462	62.700	11.184	11.362
Median word surprisal	11.826	65.500	11.295	11.760
Lowest sentence surprisal	9.971	69.700	9.464	9.899

Burstiness

Measure	Value	Human pct.	Human median	AI median
Sentence perplexity std.	0.699	14.800	1.040	0.899

Perplexity burstiness index B	-0.885	12.900	-0.829	-0.853
Sentence-length variation (CV)	0.346	26.200	0.435	0.326
Sentence-length burstiness B	-0.486	26.200	-0.394	-0.508
Syntactic variation (CV of depth)	0.372	53.600	0.363	0.312
Stylometry				
Measure	Value	Human pct.	Human median	AI median

HEATMAP

¹ China warned Taiwan on Wednesday not to seek independence from the communist mainland, hinting the island would meet disaster if Taipei insisted on splitting from the motherland. ² Taipei had failed to answer a 1995 call by Chinese President Jiang Zemin for reconciliation and had instead actively sought to split Taiwan from mainland China, the official Xinhua news agency said. ³ "We urge the Taiwan authorities to rein themselves in at the precipice so that they can see clearly that the status of Taiwan being part of China cannot be changed and that the trend of Taiwan's reunion with the motherland cannot be resisted," the agency said in a commentary. ⁴ Beijing, which views Taiwan as a rebel province, refuses to rule out the use of force to recover the island if Taipei declares independence. ⁵ However, the tough commentary by China's state news agency held out the possibility of a resumption of quasi-official talks if Taiwan's authorities showed they sincerely wanted the eventual unification they say is their goal. ⁶ The commentary was issued to mark the second anniversary of a conciliatory speech by Jiang, who urged an end to hostilities between the bitter political rivals and the opening of direct trade links. ⁷ Taiwan officials had shrugged off Jiang's olive branch and were actively working to divide China and further block economic and trade links, Xinhua said. ⁸ "The Taiwan authorities advocate 'splitting the country and ruling under separate regimes' and 'two equal political entities', which are in fact aimed at tearing apart China's sovereignty and territory," the agency said. ⁹ It said people gifted with insight and who had at heart the fundamental interests of Taiwan's people should unite and remove obstacles preventing talks. ¹⁰ "The Taiwan authorities, under pressure both from within and without, have to respond to the important speech of President Jiang Zemin and at least gesture to make strategic readjustments regarding some questions in the cross-straits relations," Xinhua said. ¹¹ It did not specify what adjustments were needed. ¹² Taiwan has barred direct trade and transport links with the mainland since the two were separated at the end of the Chinese civil war in 1949. ¹³ Taipei has clung to its ban as a last bargaining chip in talks on reunification with Beijing. ¹⁴ China's resumption of sovereignty over Hong Kong this year is expected to give Beijing more leverage in any talks. ¹⁵ "With the return of Hong Kong and that of Macau in 1999, the solution of the Taiwan question and the motherland's reunification will become more prominent issues for all Chinese people," Xinhua said.

¹⁶ On Monday, China's former President Jiang Zemin warned the nation's military personnel against the dangers of non-compliance, citing their "sacred duty" to obey their political masters, and stay loyal to the Communist Party. ¹⁷ Jiang's comments came during a speech delivered in Beijing during a special gathering of senior military officials. ¹⁸ Jiang was commemorating the upcoming 60th anniversary of the founding of the PLA, or People's Liberation Army, during the civil war.

GRAPHS

Sentence perplexity (mean surprisal)

Burstiness: local variation of predictability

Style drift between consecutive windows

POTENTIAL AUTHORSHIP/STYLE TRANSITIONS

No statistically significant style transition was detected.

SECTION ANALYSIS (sentence by sentence)

#	Sentence	AI lik.	Conf.
1	China warned Taiwan on Wednesday not to seek independence from the communist mainland, hinting the island would meet disaster if Taipei insisted on splitting from the motherland.	41%	High
2	Taipei had failed to answer a 1995 call by Chinese President Jiang Zemin for reconciliation and had instead actively sought to split Taiwan from mainland China, the official Xinhua news agency said.	41%	High
3	"We urge the Taiwan authorities to rein themselves in at the precipice so that they can see clearly that the status of Taiwan being part of China cannot be changed and that the trend of Taiwan's reunion with the motherland cannot be resisted," the agency said in a commentary.	41%	High
4	Beijing, which views Taiwan as a rebel province, refuses to rule out the use of force to recover the island if Taipei declares independence.	38%	High
5	However, the tough commentary by China's state news agency held out the possibility of a resumption of quasi-official talks if Taiwan's authorities showed they sincerely wanted the eventual unification they say is their goal.	51%	High
6	The commentary was issued to mark the second anniversary of a conciliatory speech by Jiang, who urged an end to hostilities between the bitter political rivals and the opening of direct trade links.	63%	High
7	Taiwan officials had shrugged off Jiang's olive branch and were actively working to divide China and further block economic and trade links, Xinhua said.	57%	High
8	"The Taiwan authorities advocate 'splitting the country and ruling under separate regimes' and 'two equal political entities', which are in fact aimed at tearing apart China's sovereignty and territory," the agency said.	30%	High

#	Sentence	AI lik.	Conf.
9	It said people gifted with insight and who had at heart the fundamental interests of Taiwan's people should unite and remove obstacles preventing talks.	29%	High
10	"The Taiwan authorities, under pressure both from within and without, have to respond to the important speech of President Jiang Zemin and at least gesture to make strategic readjustments regarding some questions in the cross-straits relations," Xinhua said.	21%	High
11	It did not specify what adjustments were needed.	18%	High
12	Taiwan has barred direct trade and transport links with the mainland since the two were separated at the end of the Chinese civil war in 1949.	26%	High
13	Taipei has clung to its ban as a last bargaining chip in talks on reunification with Beijing.	18%	High
14	China's resumption of sovereignty over Hong Kong this year is expected to give Beijing more leverage in any talks.	21%	High
15	"With the return of Hong Kong and that of Macau in 1999, the solution of the Taiwan question and the motherland's reunification will become more prominent issues for all Chinese people," Xinhua said.	40%	High
16	On Monday, China's former President Jiang Zemin warned the nation's military personnel against the dangers of non-compliance, citing their "sacred duty" to obey their political masters, and stay loyal to the Communist Party.	41%	High
17	Jiang's comments came during a speech delivered in Beijing during a special gathering of senior military officials.	41%	High
18	Jiang was commemorating the upcoming 60th anniversary of the founding of the PLA, or People's Liberation Army, during the civil war.	41%	High

LIMITATIONS

- AI-text detection is probabilistic and produces both false positives (human text flagged) and false negatives (AI text missed).
- Probabilities are calibrated on held-out data with equal numbers of human and AI documents (a 50% prior). The share of AI text in your context changes how a given score should be read.
- Performance drops on text from AI models, domains, languages and writing populations that differ from the training data; see the evaluation report for measured cross-model and cross-domain results.
- Paraphrasing, translation, heavy human editing and short texts reduce detection reliability.
- Formulaic genres (legal, scientific, technical) and highly polished human writing can resemble AI-generated text statistically.
- Spelling or grammar mistakes, dialect, nationality and writing ability are never used as evidence of AI authorship, but non-native writing can still differ statistically from the training data; check the false-positive audit in the evaluation report.
- Sentence-level scores use a 5-sentence context window and are less reliable than document-level scores.
- Detected style transitions indicate a statistical change in writing characteristics, not a change of author.

AI-text detection is probabilistic. The results should not be used as sole evidence for academic misconduct, disciplinary action, or authorship determination. The detector is designed to assist human review, not to replace it.
